

## DELIVERY WITH CRANE UNLOADING

### Consistently Safe and Easy

With the dedicated support from our logistics supply partner Herb Blanchard Haulage, Koppers are pleased to be able to offer pole/pile unloading at our customer's depots or job site. Commencing early 2009, this new service using truck mounted cranes will provide our customers with access to a consistent approach to unloading while vastly improving the safety performance of this task. Following approved procedures our operators will unload the pole/pile delivery directly on to the respective pole size skids as directed, or convenient location at the job site.

**No hands-on involvement or pole contact by our customer's personnel is required.**

- **Safe and consistent unloading process**
- **No customer personnel in contact with the poles**
- **Poles are put onto correct skids in-store**
- **No crane hire costs, no exposure to crane hire delays**
- **Remote site delivery – project sites**
- **Delivery to peg locations**
- **Customer crane hire – pole sorting in depot**
- **Pole relocation between depots/recycling yard – correct any stock imbalances and disposal**

## Safe Operating Procedure for Customer personnel

### Customer personnel are not required to participate in the unloading process

- Koppers' transport contractors are responsible for the unloading of the poles
- Customer personnel do not involve themselves in the unloading of poles, but simply make access available to the site for the contractor
- Customer personnel will need to sign 'proof of delivery' (delivery docket)
- Customer personnel will need to give the contractor direction or make the contractor aware of any 'special conditions' with the pole yard/site
- A procedural guideline has been developed for the contractor to follow
- The procedure includes details of an 'exclusion zone' which will apply to customer personnel during the unloading process
- Customer personnel must not enter the 'exclusion zone' which will be marked with 'safety cones'
